

Why Turn On Bitcoin Payments?

A one-page handout for Square sellers comparing Bitcoin Payments with standard in-person card fees.

The fee difference is easy to see

Square lists Bitcoin Payments at 0% through 2026, then a flat 1% starting in 2027. Square's standard in-person card rate is 2.6% plus 15 cents. That fixed 15 cents matters most on small everyday tickets like coffee, burritos, quick lunches, beer tabs, and retail add-ons.

Ticket	Card fee	Bitcoin 2026	Save now	Bitcoin 2027+	Save then
\$5	\$0.28	\$0.00	\$0.28	\$0.05	\$0.23
\$15	\$0.54	\$0.00	\$0.54	\$0.15	\$0.39
\$25	\$0.80	\$0.00	\$0.80	\$0.25	\$0.55
\$50	\$1.45	\$0.00	\$1.45	\$0.50	\$0.95
\$100	\$2.75	\$0.00	\$2.75	\$1.00	\$1.75
\$600 max	\$15.75	\$0.00	\$15.75	\$6.00	\$9.75

Why merchants care

The calculator is meant to make one customer example concrete: one ticket size, one repeat-visit pattern, and the processing fees attached to that habit. If a regular customer spends \$15 weekly, the merchant saves about 54 cents on each Bitcoin sale through 2026 and about 39 cents on each similar sale after the 1% fee begins.

Bitcoin Payments can settle in seconds, and payments are final, so the merchant avoids the chargeback path that exists with cards. It does not replace cards or cash. It adds a lower-fee option for customers who want to use it.

What to remember

0% in 2026. 1% in 2027. No card-style chargebacks. Current Square Bitcoin Payments transactions are capped at \$600. Larger purchases need another payment method.
